i) Elements of Communication Process

The communication process consists of several interconnected elements that work together to ensure effective message transmission:

- 1.  Sender (Encoder)** The person who initiates the communication process by formulating and transmitting the message. The sender must have clear intentions and choose appropriate words, tone, and medium to convey the message effectively.
- 2.  Message** The information, idea, or thought that the sender wants to communicate. The message can be verbal, written, or non-verbal and should be clear, concise, and relevant to the receiver.
- 3.  Channel/Medium** The pathway through which the message travels from sender to receiver. Common channels include:
 - Face-to-face conversation
 - Telephone calls
 - Written documents

- Electronic media (email, social media)
- Visual presentations

4.  **Receiver (Decoder)** The person who receives and interprets the message. The receiver's background, experience, and perception influence how they understand the message.

5.  **Feedback** The response from the receiver back to the sender, indicating whether the message was understood correctly. Feedback completes the communication loop and helps ensure effective communication.

6.  **Noise** Any interference that distorts or interrupts the communication process. Noise can be:

- Physical noise (loud sounds, poor connection)
- Psychological noise (stress, emotions, prejudices)
- Semantic noise (language barriers, jargon)
